

HIGH AUTHENTICITY RISK

Automated risk assessment for audio_20250505_051120_923726_4357431f.wav.

Recommended action: Manual review required before taking action on this media.

AI Forensic Summary (summarization of detector signals only — not an authenticity verdict)

Automated analysis of the audio file indicates a high overall risk of synthetic media manipulation. The synthetic voice detector identified patterns strongly consistent with an artificially generated voice model, while standard file inspection revealed no structural formatting anomalies. Overall, these signals suggest that the audio content contains synthetic speech.

Detector Signals & Evidence Breakdown

Signal Label	Risk Score	Weight	Technical Detail
File inspection	0%	0.1	audio/wav · 62.5 KB · SHA-256: 3920d4c92c20408e4f...
Synthetic voice model	100%	0.9	Fake (99.92%)
