

LOW AUTHENTICITY RISK

Automated risk assessment for **audio1.wav**.

Recommended action: No elevated automated signal; this is not verification of authenticity.

Evidence-Weighted Risk Score

32.1%

 **AI Forensic Summary** (summarization of detector signals only — not an authenticity verdict)

Automated analysis was performed on a WAV audio file to evaluate the presence of synthetic speech. The voice detection model identified signals consistent with natural human speech, resulting in an overall low risk rating for voice manipulation.

Detector Signals & Evidence Breakdown

Signal Label	Risk Score	Weight	Technical Detail
File inspection	0%	0.1	audio/wav · 1850.4 KB · SHA-256: 8aaf9f3015d0f715e3...
Synthetic voice model	36%	0.9	Real (64.32%)
